Summary

I am a final-year Computer Science & Engineering student (2027) at Assam University, Silchar, focused on backend and software development. I like taking a product from data-model design and API development through to deployment, and most of what I know came from building and shipping real software rather than coursework alone. My goal is to apply and sharpen that knowledge, learn what it takes to ship software in a real team, and grow into a stronger developer. I am also keen to add AI features to the products I build by integrating AI APIs, and I am looking for a software developer role (internship or full-time work).

Technical Skills

- **Backend:** Node.js, Express.js, Flask, Firebase, REST API design, WebSocket
- **Languages:** JavaScript (ES6+), Python, Java, C++
- **Frontend:** React.js, Vite, EJS, Bootstrap, React Hooks
- **Databases:** MongoDB, Mongoose ODM (schema design, indexing, aggregation), SQL
- **Tools & Deployment:** Git/GitHub, Docker, Vercel, Render, Postman

Experience

Java Developer Intern, InternPe *Jun – Jul 2026 · Remote*

- Completed a structured six-week internship covering core Java, object-oriented design and problem solving.
- Built and documented several working Java applications and published them in a public repository.

Open-Source Contributor, Yantraksh 2026 Backend *Mar – Apr 2026*

- Built the admin panel for the fest's official backend and contributed Node.js/TypeScript REST API code.
- Worked through feature branching, code review and pull requests.

Projects

NCC Selection Portal: Cadet Selection Management (AUS_NCC) *MERN · Live*

- Built the department's first official digital service: a MERN portal that replaced its paper-based cadet recruitment with a secure online selection process.
- Designed a dual-pipeline architecture for two isolated workflows, New Enrollment (1st-year applicants) and Rank Selection (2nd-year promotion), on separate MongoDB collections so the two batches never mix.
- Built the exam engine (global sticky timer, auto-submit on timeout, per-question review) and rank quotas with attendance-bonus marks auto-calculated into the final total.
- Enforced strict chronological round locking (R1 to R3) and granular, backup-protected database resets, with test windows handled in IST to avoid UTC drift.

AUS-NCC VAC Examination Portal *MERN · JWT · Cloudflare R2 · Live*

- Built the second official digital service for the department: a full-stack MERN portal that runs the NCC Value Added Course end to end, from bulk CSV registration through live tests to final grades.
- Implemented role-based access control for faculty and a secure live test engine that strips correct answers from the payload and auto-submits on timeout.
- Automated grading with a Best-2-of-3 master-record calculation, plus CSV and PDF exports and a question-bank manager.
- Added GPS-geofenced class attendance (verified server-side with the Haversine formula) and a zero-cost self-service password reset, with study material served from Cloudflare R2.

CampusCrib: Student Housing Platform *MERN · Firebase · Live*

- Built a student housing marketplace after running into the problem first-hand: with no hostel seat, finding an affordable room near campus meant walking door to door during monsoon admissions.
- Lets nearby property owners list rooms with photos, area details and short videos so students can compare and book remotely, built with a React frontend on Vercel, a Node/Express REST backend on Render, and Firebase OAuth authentication.

Cyber Escape Room: 5-Microservice Competition Platform *Flask · Microservices · Apr 2026*

- Architected 5 independent Flask microservices and a master admin portal handling cross-service authentication, live participant tracking and time orchestration across 4 simultaneous puzzle rounds.
- Split 4 puzzle domains (IP routing, cryptography, logic circuits, network intrusion) across nodes so no single failure could end the tournament.
- Deployed on the campus network only (LAN, air-gapped) for anti-cheat integrity and zero-latency reliability under a hard event deadline.

Wanderlust: Property Rental Marketplace (Practice Project) *Node · Express · MongoDB*

- Built while learning the MERN stack: a server-rendered rental marketplace with authentication, location-based search, ratings, comments and map integration.

Education

B.Tech, Computer Science & Engineering, Assam University, Silchar *2023 – 2027*

- SGPA 7.4/10
- Class XII (CBSE), Teresa International Academy, 2021 (80.4%)
- Relevant coursework: Data Structures and Algorithms, DBMS, Operating Systems, Computer Networks, Object-Oriented Programming, Software Engineering

Certifications & Achievements

- Machine Learning with AI (8 weeks), Internshala × IITM Pravartak, 2025
- DSA and MERN Stack, Apna College (Sigma 5.0 batch)
- IEEE Student Member (#102226793, Silchar Subsection)
- Active on HackerRank and LeetCode
