Summary

I am a final-year B.Tech CSE student (2027) from Assam University, Silchar, working toward backend and software development. I like taking a project from data-model design to deployment, and most of what I know came from shipping real software. Keen to add AI features via API integration. Looking for a software developer role (internship or full-time work).

Technical Skills

- **Backend:** Node.js, Express.js, Flask, Firebase, REST API design, WebSocket
- **Languages:** JavaScript (ES6+), Python, Java, C++
- **Frontend:** React.js, Vite, EJS, Bootstrap, React Hooks
- **Databases:** MongoDB, Mongoose ODM (schema design, indexing, aggregation), SQL
- **Tools & Deployment:** Git/GitHub, Docker, Vercel, Render, Postman

Experience

Java Developer Intern, InternPe *Jun – Jul 2026 · Remote*

- Completed a structured six-week internship in core Java, OOP design and problem solving, and published several documented Java applications in a public repository.

Open-Source Contributor, Yantraksh 2026 Backend *Mar – Apr 2026*

- Built the admin panel and contributed Node.js/TypeScript REST API code to the fest's official backend, working through feature branches, code review and pull requests.

Projects

NCC Selection Portal: Cadet Selection Management (AUS_NCC) *MERN · Live*

- Built the department's first official digital service: a MERN portal that replaced its paper-based cadet recruitment with a secure online process.
- Designed a dual-pipeline architecture for New Enrollment and Rank Selection on separate MongoDB collections, keeping the batches isolated.
- Built the exam engine (sticky timer, auto-submit, per-question review) and strict round locking, with IST-safe test windows.

AUS-NCC VAC Examination Portal *MERN · JWT · Cloudflare R2 · Live*

- Built the second official digital service for the department: a full-stack MERN portal that runs the NCC Value Added Course end to end, from registration to final grades.
- Implemented role-based access control and a secure live test engine that strips correct answers from the payload and auto-submits on timeout.
- Automated grading with a Best-2-of-3 master-record calculation, plus CSV/PDF exports and GPS-geofenced class attendance.

CampusCrib: Student Housing Platform *MERN · Firebase · Live*

- Built a student housing marketplace after hitting the problem first-hand: with no hostel seat, finding a room near campus meant walking door to door in the monsoon.
- Lets owners list rooms with photos and short videos so students can book remotely; React on Vercel, Node/Express on Render, Firebase OAuth.

Cyber Escape Room: 5-Microservice Competition Platform *Apr 2026 · Yantraksh Tech Fest*

- Architected 5 independent Flask microservices and a master admin portal handling cross-service auth, live participant tracking and time orchestration across 4 rounds.
- Split 4 puzzle domains across nodes so no single failure could end the tournament, and ran it on the campus network only (LAN, air-gapped) for anti-cheat integrity.

Wanderlust: Property Rental Marketplace (Practice Project) *Node · Express · MongoDB*

- Built while learning the MERN stack: a server-rendered rental marketplace with authentication, location-based search, ratings, comments and map integration.

Education

B.Tech, Computer Science & Engineering, Assam University, Silchar *2023 – 2027*
SGPA 7.4/10 · Class XII (CBSE), Teresa International Academy, 2021 (80.4%)

Certifications & Achievements
